

June 30, 2021

The Honorable Rosa DeLauro Chair Committee on Appropriations United States House of Representatives Washington, D.C. 20515 The Honorable Kay Granger Ranking Member Committee on Appropriations United States House of Representatives Washington, DC 20515

Dear Chair DeLauro and Ranking Member Granger:

As your committee proceeds to mark up the Fiscal Year 2022 Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations bill, we urge you to oppose any efforts to weaken FDA's authority over cigars or any other tobacco products.

Tobacco use is the leading cause of preventable death and disease in the United States. More than 480,000 Americans die from tobacco use each year, and more than 16 million Americans are currently living with a tobacco-caused disease. With the enactment of the Family Smoking

Prevention and Tobacco Control Act in 2009, Congress recognized that all tobacco products should be overseen by an agency with expertise in assessing health risks and experience promulgating science-based regulation.

Over the years, manufacturers and sellers of tobacco products have sought to exclude certain products from FDA's authority or weaken FDA oversight of them, including through the appropriations process. Fortunately, Congress has not restricted FDA's statutory authority. All tobacco products pose risks to health and should adhere to science-based public health protections.

Manufacturers and sellers of certain types of cigars, for example, have argued that their products should not be overseen by FDA despite the agency's determination that there is no appropriate public health justification for exempting them. While cigar smoking is often perceived as an activity of older adults, cigars are popular among youth, particularly high school boys. Cigars are marketed in a wide array of flavors and are often inexpensive, making them especially appealing to youth. Despite industry claims to the contrary, cigar use has serious negative health risks and can lead to lung and heart diseases and numerous types of cancer. FDA has determined that all cigars are potentially addictive, and that cigar use leads to approximately 9,000 premature deaths each year.

We are grateful that Congress has rejected efforts in the past to weaken FDA's authority over tobacco products, and we urge you to once again reject any such efforts during consideration of the FY 2022 Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations bill.

Sincerely,
