

TIME TO GET BACK ON THE BOOKS

The pandemic has taken a toll on women's health in alarming ways. A recent survey shows that many women have missed routine preventive care, such as annual exams and cancer screenings.

24% of women 40 to 60 years old reveal it has been **more than 3 years** since their last appointment with their OB-GYN or primary care provider.

90% of women say they have been visiting friends and family, dining, shopping and more during the pandemic, but **only 48% of women** are visiting their doctors' offices.

More than half of women in the U.S. report **not knowing** how often they should get screened for gynecologic or breast cancers. The information gap is even wider for younger women and women of color.

26% of women 40–60 years old say they do not know how often they need to be screened for breast cancer.

42%

of women 40–60 years old say they do not know how often they need to be screened for cervical cancer.

47%

of white women say they do not know how often they should be screened for cervical cancer.

53%

of Black women and Latina women report not knowing how often they should be screened for cervical cancer.

37% of white women,

47% of Black women,

47% of Latina women, &

54% of Asian women

do not know how often they should be screened for breast cancer.

Over 1 in 6 women between the ages of 21 and 24 receive information regarding health and cancer screenings from social media.

More than 1 out of every 2 women between 21 and 39 years old (51%) consider their OB-GYN as their primary care provider.

61% of women in the U.S. say that they don't often remind their female friends, family members, and/or loved ones to get their routine cancer screenings.
